EDUCATION

National University of Singapore (NUS)

08/2023 - 05/2027 (Expected)

Bachelor of Computing in Computer Science (Hons), Minor in Psychology

Coursework: Data Structures and Algorithms, Network Programming, Software Engineering, AI & ML

WORK EXPERIENCE

Grasshopper, AI Software Engineer Intern

05/2026 - 08/2026

- **Built and owned** a fullstack **agentic CLI platform**, orchestrating multi-step workflows using **Golang, LLM APIs, and async task pipelines**, reducing manual developer operations and enabling rapid prototyping of AI agents.
- **Designed and deployed** a **Slack-based AI assistant** to automate internal workflows, integrating **event-driven architecture, REST APIs, and LLM-powered intent parsing**, significantly improving team response time and operational efficiency.
- **Engineered** a **"codebase-to-knowledge"** system by transforming repositories into queryable documentation using a **RAG pipeline (embeddings + VectorDB + retrieval orchestration)**, enabling developers to navigate large codebases with natural language.

NEC, Software Engineer Intern (Part-time)

3/2026 – Present

- **Engineered and automated** large-scale validation pipelines for **1,000+ bike plate detection models**, executing end-to-end test coverage in under 48 hours to support time-critical customs clearance operations.
- **Designed and developed** an internal **RAG-based knowledge UI tool**, integrating **vector embeddings, retrieval pipelines, and LLM orchestration**, enabling faster internal documentation search and reducing manual lookup effort for engineers.

Pallo, Software Engineer Intern

12/2025 - 1/2026

- Led migration **from Mastra to the AI SDK**, redesigning the agentic AI flow for greater reliability, extensibility, and maintainability.
- Implemented **prompt caching**, reducing AI inference costs by an estimated 90% while significantly improving response latency.
- Delivered features across web and mobile (**Expo**), driving an estimated 80% improvement in user experience and retention.

Pints.ai, AI & Full-stack Engineer Intern

5/2025 – 11/2025

- Designed and deployed **Autothought** - a **LLM-powered financial intelligence services** for a **B2B SaaS platform** using **React, Next.js, PostgreSQL, Docker, Kubernetes**, and **AWS S3**, serving **enterprise clients**.
- Built an **automated data pipeline** integrating **web scraping, OCR**, and **Playwright**, **reducing analyst workload by 80%**.
- Engineered **asynchronous APIs** with **long polling** and **webhook callbacks** to support high-latency background jobs.
- Designed **LLM-powered evaluation modules** for validating document inputs, improving report generation accuracy and user trust.
- Worked extensively in **Unix/Linux environments**, **debugging Kubernetes pods** and **optimizing system performance**.

PROJECTS

Rift Rewind Chronicle | React, AWS Bedrock, Express

(<https://github.com/vrisdng/rift-rewind-chronicle>)

- An AI-powered "Spotify Wrapped" for League of Legends players using Amazon Bedrock. Won **3rd place (5,000 USD prize)** in **Rift Rewind Hackathon 2025** hosted by **AWS** and **Riot Games**.

EduChat

(<https://course-ai-three-liard.vercel.app/>)

- **Course AI agent assistant for academic professor**, being actively used by **30+ students** in NUS cours

EXTRA-CURRICULAR ACTIVITIES

NUS Game Development Group | Vice President

- Organized annual game jams and weekly workshops on game development for 500+ students in NUS

Citadel APAC Terminal 2025 | Participant

- Designed intelligent AI agents for programming-based strategy games by Citadel, competing against international participants

Develop at Ubisoft 2026 | Mentee - Game Design Track

- One from 74 selected out of 1000 worldwide applicants to receive mentorship from Ubisoft to design a prototype game project
